EDUCATION

North Carolina State University, Master of Science in Computer Science, USA (Anticipated May 2021)
Coursework: Data Science, Algorithms, Databases, Business Intelligence, User Experiences, Artificial Intelligence **GPA: 3.8/4**

The University of Mumbai, Bachelor of Engineering in Computer Science, IND Aug 2015 to June 2019
Coursework: Big Data, Operating Systems, Neural Networks, Object-Oriented Programming, DevOps **GPA: 9.35/10**

SKILLS

- Languages	Python, Java, C, C++, Shell Scripting
- Databases	MySQL, Microsoft SQL Server, PostgreSQL, MongoDB
- Frameworks	React, Spring, Bootstrap, Vue.js, Flask, Laravel, Django, Apache Spark, Hadoop, Kafka
- Web Technologies	HTML, CSS, PHP, JavaScript, AJAX, JSON, XML, Restful API's
- Libraries	Pandas, NumPy, Scikit-learn, Keras, NLTK, OpenCV, JDBC
- OS & Tools	Web Services, Unit Testing, Git, VS Code, Eclipse, Android Studio, Ansible, Jenkins

EXPERIENCE

Software Engineering Intern | Murano Corporation | RTP, USA May 2020 to Aug 2020
- Leveraged **REST APIs** to upgrade existing search feature using **Elasticsearch** and **Logstash** to support digital media.
- Utilized Spring Boot, React, and MySQL to develop a dashboard to visualize the complete supply chain with features such as live tracking using **Mapbox** and data visualization using **Google Charts**.
- Wrote cron jobs using **PHP** for automating tasks on the Linux server such as taking backups, monitoring transactions, generating reports, and logs.

Full Stack Web Developer Intern | VESIT Renaissance Cell (VRC) | India May 2018 to Oct 2018
- Designed and developed UI components using **React** and improved performance of the web application using **AJAX**, **Content Delivery Network (CDN)**, and minified stylesheets. Constructed a relational database using **PostgreSQL** and implemented triggers, procedures, and views. Performed unit testing and achieved 90% test coverage across all codebase.

Software Developer Intern | Aduera | India May 2017 to Oct 2017
- Built a responsive and feature-rich UI using **Bootstrap** that allowed customers to drag and drop books into the cart.
- Worked on **Django** backend to debug and improve the efficiency of existing features like payment, authentication, and nearest bookstore finder using **Google Maps API**. Succeeded in achieving a target of an increase in the user-base by 20%.

PROJECTS

A Debugging Tool (NLP, Python, Automation) [\(Source code\)](#)
- Leveraged Stack Overflow to improve debugging by displaying an optimal solution to the error given by a program on execution. Used Python, **Natural Language Processing**, and **Scikit-learn** library to display an optimal solution to the user.

Face Recognition (Machine Learning, Neural Nets) [\(Source code\)](#)
- Developed a Convolutional Neural Network using **TensorFlow** for face detection and recognition.
- Utilized techniques such as data augmentation and hyperparameter optimization to improve accuracy of the model by 10%.

Sentiment Analysis using Apache Spark (Python, Kafka, Spark) [\(Source code\)](#)
- Processed live data streams using Spark's streaming APIs and Python to perform the sentiment analysis of real-time tweets by counting the number of positive and negative tweets using **Natural Language Toolkit (NLTK)**.

A Dynamic Resume Builder (Automation, User Experience) [\(Source code\)](#)
- Designed and built a single page web application for resume building using **Vue.js** and **MongoDB**.
- Used **Balsamiq** for website wireframing and **Lighthouse Chrome** for auditing the website for SEO and device compatibility.

Operating Systems: Pintos (C)
- Designed and implemented parts of the Pintos operating system framework supporting thread synchronization, running user programs, virtual memory management, and file system access.

ACHIEVEMENTS & EXTRACURRICULAR

- Published a paper titled [Smart Home Security Using IoT and Face Recognition](#) in the IEEE Xplore.
- Served as a finance team member at a Graduate Student Association and managed events having a footfall of more than 1000.
